

A useful scoring forecast is a range, not one number

The tested 80% range is almost twice as wide for stars as it is for role players.

Half-width of the 80% scoring range

The ranges stay calibrated one season later

Method: Ridge model trained through 2022-23; range sizes learned on 2023-24; final check on 2024-25. Roles use pregame scoring averages.
